Bluewater Awarded MOH Certification In China

[Bluewater](#) has been awarded product certification in China for its Spirit and Pro water purifiers that have the company's unique [SuperiorOsmosis™](#) technology that reduces the water wastage normally associated with traditional reverse osmosis systems. Required for all foreign manufacturers of residential water treatment units, China's MOH certificate is awarded by the Ministry of Health and is considered one of the most demanding when it comes to meeting qualification and product testing standards.

"We are delighted that the Bluewater application for China's MOH

certification has been successful, which is further evidence of the extremely high quality of our water purifiers that offer unmatched clean water delivery rates for homeowners and others who want to remove pollutants such as micro-organisms, pesticides, lead, arsenic and other toxic substances from their tap drinking water,” said Niclas Wullt, Managing Director of Sweden headquartered Bluewater.

Ggaining MOH approval involve the submission of:

- Wetted parts list;
- Schematics;
- Literature;
- Product information; and
- Supporting testing data or approvals, such as NSF certification.

Bluewater’s water purifiers such as the Spirit and Pro series that boast Bluewater’s unique second-generation reverse osmosis [SuperiorOsmosis™](#) technology were required to undergo tough testing, involving material safety, functionality and hygienic testing aimed at protecting Chinese consumers against products that do not deliver on manufacturer claims. MOH testing is carried out by an approved laboratory in China and upon successful completion of testing, the test results and all other product information is submitted to an expert committee who issues the recommendation for MOH approval.

Bluewater’s patented second-generation reverse osmosis technology removes practically all known tap water contaminants, including lead, atrazine and pharmaceutical residues, while delivering unmatched on-demand capacity and compactness.

Bluewater water purifiers are available across China and other parts of Asia and are backed up with a solid commitment to delivering superior services, parts and filter replacement support.

Sold in major markets around the world, Bluewater SuperiorOsmosis™ patented technology delivers on-demand cleaner, healthier water direct from the tap. Innovated with love in Sweden, Bluewater water purifiers improve user quality of life, health and wellbeing by removing practically all known

contamination from drinking water, including micro-organisms, pesticides, heavy metals and toxins. Bluewater™ is the registered trademark of Blueblue AB, a company registered Sweden.
